Project Proposal

Stabilizing Cortical Wetware via Particle Swarm Optimization

Abstract

Briefly summarize the problem, proposed solution, methods, and expected outcome in approximately 150–250 words.

1 Introduction

Introduce the project topic and explain its broader context and significance.

2 Problem Statement

Clearly define the problem or question this project will address. Identify the intended users, stakeholders, or affected communities.

3 Objectives

List the specific, measurable goals of the project.

1. Objective one.
2. Objective two.
3. Objective three.

4 Background and Related Work

Summarize relevant research, existing solutions, and prior work. Explain how this project differs from or builds upon them, citing sources as appropriate.

5 Proposed Approach

Describe the planned design, methodology, algorithms, tools, and technologies. Include diagrams, models, or equations if they clarify the approach.

6 Scope and Limitations

Define what is included in the project and identify assumptions, constraints, and known limitations.

7 Deliverables

Describe the tangible outcomes that will be produced, such as software, datasets, documentation, experiments, or a final report.

8 Evaluation Plan

Explain how success will be measured. Specify evaluation criteria, baselines, datasets, experiments, user studies, or other validation methods.

9 Project Schedule

Timeframe	**Milestone or Activity**
Week 1–2	Topic refinement and background research
Week 3–4	Design and implementation planning
Week 5–8	Development and experimentation
Week 9–10	Evaluation and revisions
Week 11–12	Final report and presentation

Table 1: Proposed project schedule.

10 Resources and Budget

Identify required software, hardware, data, personnel, and estimated costs.

11 Risks and Mitigation

12 Expected Contributions

State the anticipated academic, technical, practical, or social contributions of the project.

Risk	Mitigation Strategy
Risk one	Planned response
Risk two	Planned response

Table 2: Potential risks and mitigation strategies.

13 Conclusion

Restate the problem, proposed approach, expected outcomes, and project significance.
